Question 37

🔖 Revisit Later

Read the following passage and answer the given questions.

On August 9, 2016, Raghuram Rajan, the governor of Reserve Bank of India (RBI), released the last bimonthly monetary policy statement that would be drafted under his leadership. There were no changes made. According to the RBI, the growth in the current fiscal year is projected at 7.6 percent because of the beneficial effects of good monsoon and the expansionary effects of the implementation of the Seventh Pay Commission's recommendations. Therefore, growth is not an immediate problem. However, in RBI's view, this growth brings with it the risk of inflation. Hence, any further reduction in interest rates was not warranted, at least not for now.

Rajan has the image of a policymaker with a penchant for a high-interest rate regime. When he took over as the governor of RBI in the first week of September 2013, the repo rate stood at 7.25 percent. It was raised to 7.5 percent soon thereafter, and then to 7.75 percent on October 29, 2013, and to 8 percent on January 28, 2014, where it stayed until January 15, 2015. Since then, the repo rate has been reduced thrice by 25 basis points (a quarter of a percentage point) and once by 50 basis points to bring it to its current level.

The defense of Rajan had for his adherence to a high-interest rate policy was that it
